Claims 1-83 are rejected under 35 U.S.C. 103(a) as being unpatentable over the patent to Dris et al. (USP 6,716,505).

Dris et al. recognize that a reduced radial deviation is a result-effective parameter in storage media that can comprise a plastic substrate, a data storage layer, another plastic layer having a different composition than the plastic substrate, and a reflective layer (see column 2, lines 13-30 and column 3, line 2). The experimental modification of this prior art in order to ascertain optimum operating conditions (e.g., determine the specific radial deviation of the storage media) fails to render applicant's claims patentable in the absence of unexpected results.

Claims 1-83 are again provisionally rejected on the ground of nonstatutory double patenting over claims 51-75 of copending Application No. 11/102,068 for the reasons of record. This rejection has been maintained since it is not the only rejection in the case.
